CONNECTION BARRIERS

WPS

Connect the relay NO output of the IO module to the “External Open” connection of the WPS access terminal. Same as the Command module (same as the open function via the QCR)

There is a contact available CLOSED. Now it is a opto input to the + 24V and a switch in the barrier.

If we need to read it in our IO module it should be connected to a opto connected to +24V and not to GND.
